App review "Realise your dreams"

The text presents a positive user review of a lifestyle and personal development mobile application called “Realize your dreams" (Version 1.0)”.

The app works on a subscription model, costing either €55 annually or €8 monthly, and is available in all app stores.

Though the user (Jonah_Ng1) rates the app five stars, the real working of functions requires more clarification. The application is a psychological tool designed to help users identify, analyze, and systematically achieve their personal goals and wishes.

Basic principles of the application:

How it works: The user inputs specific desires or dreams into the app. Using principles designed by professional psychologists, the app analyzes this data. This app offers users to prioritize, question themselves, and reflect on their expectations.

Recommendations: The app divide dreams into personalized, realistic targets and step-by-step mini-goals. Interestingly, it forces users to ground themselves, sometimes helping them realize a goal is completely impossible or achievable.

Community: The review mentions an unique feature where dreams can be seen by others. For instance, one user’s dream was noticed by a celebrity chef, leading to a real-world work experience offer.

Critique of the advertisement:

The advertisement and description of the app could be improved. There are a lot of emotional buzzwords like "making dreams come true" but we can not to clearly explain the privacy settings and the technical interface. To make it more user-friendly, the creators should mention that the app is an interactive, psychology-based goal tracker rather than a magical solution.
